

ICE FLEX[®]

Collision protection for industrial cold storage

ICE FLEX®

Collision protection for industrial cold storage

Processing and storing cooled and deep-frozen products often involve different work flows. For example, employees are only allowed to work in cold stores for short periods and must therefore work faster to complete their duties. In addition, heavy protective clothing limits their freedom of movement, glasses can fog-up, etc. These specific circumstances can create additional safety risks and require adapted solutions.

❄️ TB 400 SERIES

The ICE FLEX® TB 400 barrier range protects people and infrastructure in the freezer against the impact of light and heavy forklifts. Depending on the type of forklift you can opt for a TB 400 protection with single or double tube including handrails.

❄️ FLIP

This kick rail offers full ground level protection up to ankle height. Thanks to its flexible and modular design with connection pieces, it is possible to create an endless safety path. The FLIP is therefore the ideal partner to provide extra protection for sandwich panels and/or insulation walls in large cold stores against collisions with carts, transport pallets, etc. The ICE FLEX® Flip can be combined with other BOPLAN® traffic barrier systems, including the TB 400 series.

❄️ KP SERIES

Prevent costly and structural damage to columns in your freezer with our range of ICE FLEX® column protectors. With a wide selection of sizes, the most suitable column protector can now be installed in any working environment, regardless of temperature.

❄️ RACKEND

Collisions of storage racks by forklift trucks are among the most common industrial accidents in storage areas. The ICE FLEX® RackEnd rack protectors are therefore the ideal partner to protect the front end of shelves in the freezer and to prevent storage damage and human suffering.

❄️ RACKBULL®

This innovative system for rack protection helps to prevent the collapse of racks as a result of a collision. The RACKBULL® in ICE FLEX® version is a universal rack protection that fits on all types of stacking racks.

❄️ BOIMPACT

The BO Impact ICE FLEX® protection post offers excellent protection against collisions near rolling gates. This protective post is perfect for protecting zones with an increased risk of impact such as access roads, gates and corners.

❄️ GOAL POSTS

The ICE FLEX® Goal Post is a flexible height restriction that offers (high) gates, roofs and bridges in cold stores adequate protection against collisions with vehicles, trucks and buses.

With the ICE FLEX® range, BOPLAN® offers numerous safety solutions that have been specifically designed and tested for use in freezing temperatures down to -30°C. The standard BOPLAN® polyolefin has been adjusted so that the ICE FLEX® products offer optimum impact protection and maximum safety even in freezing conditions.

DISCOVER OUR COMPLETE RANGE:

Modular crash protection
made from flexible polymer

Industrial safety gates
for robust fall protection

Wear-free anti-skid solutions
to prevent falling and slipping

Indestructible floor markings
with a professional look

Protective bumpers
to prevent injuries or damage
